

Approved Hemp CBD Varieties – as of March 13, 2019

The following high CBD varieties of hemp seed/clones have been approved by DATCP to grow in Wisconsin in 2019. Approval to grow does not guarantee a variety will pass the DATCP pre-harvest regulatory test as THC levels in high CBD hemp varieties is not stable. **Growers are responsible for monitoring their crops. Any field/variety that does not pass the required DATCP pre-harvest regulatory test with a delta-9 Total THC concentration of 0.3% or below will be ordered to be destroyed.** DATCP calculates Total THC as d9-THC + 0.877*THCa.

Any high-CBD variety not included on this list must be approved by DATCP prior to planting in Wisconsin. To seek approval, please send the name of the variety, the name of the supplier, and a lab analysis of the variety (often referred to as a Certificate of Analysis) to DATCPIndustrialHemp@Wisconsin.gov.

Prohibited Variety/Strain: C4
